

[Calibration and Adjustment]

SCHLEICH is certified in accordance with ISO 9001:2015.

➤ **Delivery including calibration certificate**

All SCHLEICH testing devices are delivered with a calibration certificate. For any enterprise, monitoring of its testing equipment is essential. Regular calibration of your test equipment within the scope of test equipment monitoring is an important requirement of ISO9001 for assuring quality. Therefore, we calibrate your test equipment in accordance with the applicable standards.

➤ **Periodic calibration and adjustment**

In case an excessive degree of deviation of the test instrument is found during calibration, adjustment is mandatory.

All measurements taken before and after adjustment are recorded on the calibration certificate.

Our calibration procedures are traceable to national standards. Our ISO9001:2015 certified Calibration Center also meets other norm requirements, e.g. DIN EN ISO 10012 - "Requirements for measurement processes and measuring equipment". We also specify measurement uncertainties as part of our calibration!

We calibrate conforming to standards. Our calibrations are DAKs-traceable and also meet the requirements of your audits.

We also offer cost-efficient professional calibration of non-SCHLEICH-devices.
